

20 Years of Engineering Excellence

CEI was founded in 1986 with the goal of providing quality systems design, engineering, and installation services to broadcasters.

The CEI philosophy is simple: employ talented, dedicated people and equip them with the best tools available in order to deliver services and solutions that guarantee customer satisfaction.

To ensure consistent results, we only employ full-time professionals experienced in their craft.

When it comes to service, CEI is the team you can rely on.

Professional Service You Can Trust

Frank Giliotti, VP CEI Service

Hi,
I'm Frank Giliotti,
Vice President of
Technical Services
at CEI.

When you engage CEI, you engage a professional technology partner who will not only help create your future vision but support your existing operations.

CEI's operates a **Center of Excellence for Engineering Maintenance and Repair**. That means we exist to deliver a service of the highest standard and quality to our customers.

Every member of the **CEI Service and Support Team** is a full-time professional. In addition to many years of 'hard-earned' industry experience, our Service Engineers receive regular industry training and authorized certification to keep pace with new products and technologies.

Each year, we work on thousands of products each representing hundreds of manufactures. We also offer flexible and highly competitive **Customized Maintenance and Service Contracts** to fit the specific needs of our clients.

A comprehensive preventative maintenance package can be designed that provides regularly scheduled on-site service including all labor and parts over an extended period of time. That saves you the hourly charges normally associated with scheduled and rush repairs.

Your professionals need equipment and systems they can rely on. That starts with a reliable and affordable service provider. So, call CEI today.

Frank G.

Service Rates You Can Afford
